

**Patent Application of Dennis J. Gregerson for "Rotary Broom Attachment for Traction
Vehicles" continued**

Page 39

Abstract: A rotary brush assembly that is mounted to a traction vehicle such as a skid steer type vehicle in such a way to as to be capable of sweeping horizontal, vertical, and overhead surfaces. The device is capable of sweeping in close proximity to objects protruding from these surfaces. The assembly is attached to the vehicle such that the operator has and an unrestricted view of the swept surface immediate to the brush, allowing the operator to address skips as they occur.
